

***Amount Requested: \$500,000***

Consistent with the top priority of President Obama's 2011 budget proposal, the Center for On-Demand and Collaborative Computing (CCODC) at Marist College seeks to create new jobs by helping companies to apply new technology to their business practices to spur growth and create new jobs. Marist will purchase an IBM z10 server to support work of the college's business incubator, which will work with local firms to apply technology for economic growth and new job creation.
